REMARK / ARGUMENT

1. In response of Final Office Action mailed on 12/13/2005, Applicant filed Requesting for Continuation of Examination (RCE) on 4/13/2006. Applicant's amendment has been entered and made of record. Now claims 1, & 3-10 are pending.

DETAILED ACTION

Claim Objections

2. Claim 3 is objected to because of the following informalities: the term " the second material " is not consistent.

The examiner suggests "the second electrically insulating material" as claimed in independent claim 1.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6, 9, & 10 are rejected under 35 U.S.C. 102(b) as being anticipating by Mori et al. (US 6384440, hereafter 'Mori')

Although it is noted that claims 6, 9 & 10 are a product-by-process claim, product-by-process claims are directed to the product no matter how actually made. *In re Taylor*, 149 USPQ 615, 617(CCPA 1966). Consequently, it is the patentability of the final product, and not the patentability of the process, that must be determined in a product-by-process claim. *In re Thorpe*, 227 USPQ 964, 966 (CAFC 1985), *Ex parte Edwards* 231 USPQ 981, 983 (BdPatApp&Int 1986)

3. Pertaining claims 6 & 9, Mori discloses a ferroelectric capacitor (**Column 3 & line 35-67**)

4. Pertaining claim 10, Mori discloses a FeRam memory device (**Column 5, lines 15-16**)

Allowable Subject Matter

Claims 1, 7, & 8 allowed over the prior art.

The following is an examiner's statement of reasons for allowance:

5. Pertaining claims 1,7, & 8, the prior art fails to teach etching the ferroelectric layer and the layer of the second electrically insulating material to form isolated ferroelectric element witch have exposed side surface that are substantially perpendicular to the ferroelectric layer and providing conductive layer in contact with the each side surface of ferroelectric layer and the second electrically insulating material;

Performing an annealing step to crystallize the ferroelectric material while the conductive material promoting crystallization of the ferroelectric material to a higher degree than the first and second electrically insulating materials, whereby the crystallization proceeds substantially horizontally through each of the ferroelectric element as claimed in independent claim 1.

6. Claim 3 would be allowable if rewritten to overcome the objection(s), set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

7. Claims 4 & 5 are objected to as being dependent upon a base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kanaya et al.(US 20040084701)
